

MAYUR GANGIREDDY

Hyderabad, Telangana 500035 | +91 6281192139 | mayurgangereddy12345@gmail.com | [Github](#) | [LinkedIn](#) | [Portfolio](#)

Career Objective

I Software Engineer with experience building production web, mobile, backend, and AI-powered applications. Skilled in Python, JavaScript, Java, REST APIs, databases, and cloud-integrated systems. Experienced in developing end-to-end products, integrating LLMs and AI agents, and deploying scalable applications across Web, Android, and iOS. Passionate about building high-impact products in fast-moving startup environments

Education

SPHOORTHY ENGINEERING COLLEGE, HYDERABAD, INDIA Hyderabad, TG <i>Bachelors of Technology in Computer Science-AIML</i>	2021-2025
SRI GAYATRI JUNIOR COLLEGE, HYDERABAD, INDIA Hyderabad, TG <i>Board of Intermediate Education - MPC</i>	2019-2021

Skills

Programming Languages: Python, Java, JavaScript, C, Dart
Frameworks & Libraries: Flutter, TensorFlow, PyTorch, Scikit-learn, LangChain
AI/ML: CNN, Time-Series Modeling, Computer Vision, OCR, Generative AI, Agentic AI, LLMs, XGBoost
Databases & Cloud: Firebase, Supabase
Tools: Git, Android Studio, Xcode, Jupyter, PyCharm, Plesk

Projects

Post-CNN framework for precise ship detection in high-resolution optical satellite imagery – Designed a post-CNN framework for precise ship extraction from high-resolution satellite imagery. Implemented water/non-water classification followed by CNN-based ship detection.

Android Applications: Developed the **Criminal Laws by TGPA** app, available on the [Play Store](#), to enhance operational efficiency for the Telangana State Police and also developed the **SPHN Hostel** app, designed to streamline hostel management, yet to be launched

Intelligent Agricultural & Climate Data Q&A System: Designed a conversational analytics system that answers natural language queries by integrating government crop production and rainfall data, enabling cross-domain insights with full data traceability.

Multimodal Emotion Detection System (Face + Voice): Developed a Streamlet-based multimodal AI system for emotion recognition using a trained EfficientNet-B4 for facial emotions, MFCC-based MLP for speech emotion classification

Agentic AI Platform: Developed AI agents capable of multi-step reasoning and workflow automation, Integrated LLMs, APIs, and external tools to automate business processes.

Internships

Java Programmer - Acmegrade - Designed, implemented, and maintained Java-based applications that can be high-volume and low-latency - Envisioned system features and functionality	11/2023 to 01/2024
Machine Learning (ML) Engineer - Bharat Smart Services - Designed and developed a multi-model NILM system for appliance-level energy disaggregation. - Built OCR-based smart meter reading solutions using Computer Vision and Deep Learning techniques. - Developed and deployed Agentic AI applications and LLM-powered workflow automation systems. - Built and trained CNN and time-series models for smart meter identification and appliance classification. - Developed Android, iOS, and Web applications integrated with AI and cloud services. - Designed and integrated REST APIs, databases, and backend services for production applications. - Worked with Python, Machine Learning, Firebase, Supabase, and modern AI frameworks to deliver end-to-end solutions.	01/2026 – Present
